THE TOUCH OF
SUSTAINABILITY.
DISCOVER THE BMW i HOME CHARGING.

HOME CHARGING. YOUR VERY OWN POWER SOURCE.

While most countries offer plenty of conventional service stations for traditional vehicles, there are even more electric charging possibilities for your BMW i and BMW iPerformance model – at your home. The Standard Charging Cable – Mode 2 is perfect for flexible use wherever you are. Topping up your car at home is also quick and convenient: With the BMW i Wallbox, it only takes a few hours.

FOR FAST AND SAFE CHARGING AT HOME

The progressively and ergonomically designed **Wallbox Pure** is the ideal home charging station and fulfills the most stringent demands in terms of safety, comfort and design. The Wallbox Pure is currently the only product on the market whose purpose-designed system enables fast home charging of an BMW i automobile. In comparison to standard charge cables for mains outlets, the Wallbox Pure can reduce charging times of the BMW i3 by up to 70 % depending on the local electricity infrastructure – to less than five hours; it also supports the vehicle function enabling charging at certain times of day, to benefit from low-price electricity tariffs, e. g. at night. Practical storage compartments, an integrated key switch, and a stop/start button further maximize functionality, while enhancing the vehicle's everyday usability

Wallbox Pure Offer:
Rs. 260,000

the **Wallbox Plus** is another home charging station for Battery electric vehicles and Plug-in Hybrid Electric Vehicles. Newly designed wallbox Plus provides a range of benefits. It has built in RFID Detection where the charging process is only possible when the RFID is detected by the charger itself and can be programmed up to 3 vehicles. The wallbox has been developed taking account of many customer requirements and the experience gathered from the first generation of Wallboxes. Attention has also been given to the design and material, safety and sustainable production

Wallbox Plus Offer:
Rs. 360,000
